**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 21 November 2003.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 31 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kacian (US5,364,763 Nov. 15, 1994) in view of Lockhart et al (US6,040,138 march 21, 2000).

Kacian et al teach a method of sample preparation comprising obtaining a sample comprising a first type of cells and second type of cell wherein the first type is at least 10 times more susceptible to lysis agent than second type (see whole doc. esp. col. 7 lines 45-50 where sodium deoxycholate is capable lysing white blood cells associated with mycobacteriu leaving

Art Unit: 1637

the mycobacteria cellularly intact). After lysis , he separates all of the white blood cells from mycobacteria (see col. 11 line s 56-60).

Kacian et al do not teach hybridizing to a plurality of different probes.

Lockhart et al teach performing hybridization assays using arrays with a mutltitude of different probes (see whole doc. esp. abstract). They teach concentrations of 5000 probes (see col. 3 line16). They teach beads (see col. 13 line 64).

One of ordinary skill in the art would have been motivated to apply Kacian isolated DNA from mycobacterium to Lockhart et al's array in order to monitor the expression of genes. As Kacian state that their method was designed for preparation of DNA for hybridization assays, it would have been prima facie obvious to apply Lockhart et al's hybridization arrays to the DNA isolated from Kacian in order to monitor the many different gene expressions.

## SUMMARY

2. Concerning claims 12-17 there is no prior art that teach the claimed method in which the first type of cell is animal and second type are plants cells or first type of cell is animal and second type are fungi or first type of cell is gram negative and second type are gram positive bacteria or first type of cell is yeast and second type are plant cells or bacterial cells. Concerning claims 35-40 are objected to for depending on rejected claim. If claim 31 were to be amended to recite the limitation of at least 5000 probes as discussed in the office action filed 5/21/03, the prior art rejection would be overcome.

*Conclusion*

3. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
